What Clients Say About Us

"I've worked with VisionCore on numerous projects, and have been very pleased with the results. They provide leadership, commitment and integrity that are becoming increasingly difficult to find in firms today. Their technical capabilities have given us the ability to consistently complete projects on time and under budget."

David Logsdon
Chief Information Officer
Lending Tree Loans

"They showed an overall commitment to our success that you don't find in too many firms. VisionCore definitely went the extra mile to make an almost impossible project schedule work."

Michael Tchao
VP, Customer Experience
move.com

"VisionCore has provided us with a competitive advantage by building an intuitive and streamlined interface. We've received numerous comments from our customers praising the solution."

Roger Cohen
Founder and Chairman
Strategic Legal Systems

Professional Services

Whether you're developing a new client server or web solution, you will need to determine who will design, build and manage it. Most importantly, you'll need a partner who can ensure the new solution addresses your overall business needs. That's where VisionCore can help. Our consultants have a deep knowledge of the entire System Development Life Cycle and understand the complexity of today's client server and web application development projects. We provide end-to-end services, including the following:

Strategic Analysis

Many of our competitors focus solely on technology solutions, and often neglect the 'business' side of business. VisionCore, on the other hand, understands the importance of ensuring technology addresses specific business goals. Whether you're re-engineering an existing business process or designing one from the ground up, our analysis will help make certain your technology projects support your long-term business strategy.

Application Development

We offer application development expertise to help our clients deal with the complexity of their client server and web development projects. Our process includes detailed requirements definition, design, implementation and testing phases, so your applications give you the performance, scalability and functionality your business needs. VisionCore's solutions are more than just applications. Often, we provide our clients with frameworks that become the foundation for future development projects.

System Integration

Not every project requires custom application development, and oftentimes applications must integrate with existing custom and packaged systems. VisionCore has proven experience in integrating multiple platforms and systems into a seamless infrastructure.

Project Management

VisionCore believes all development projects require proper management to be successful. All of our projects go through detailed scoping, estimation and budgeting steps before any design or implementation work begins. Throughout the project lifecycle, project management plays the critical role of resource planning, status monitoring and communication.

The Solution is in Sight.
